

R3 Carrier Beam Test Document Set - User Index

USER GUIDE - do not upload this index as incident evidence when testing unguided model discovery.

Document ID	Incident	Record type	Status
R3-INDEX-001	R3 carrier beam - 10/14/2024	Application test evidence	Synthetic / controlled

How to use the package

Stage	Folder	When to supply	What it tests
Default library	01_default_references	Before incidents are created; shared across runs.	Baseline standards, plant vocabulary, equipment orientation, source hierarchy.
Starter evidence	02_starter_documents	Attach with the initial incident description.	Step-0 understanding, tagging, initial specialist fan-out, evidence-gap recognition.
Requested evidence	03_requested_evidence	Provide only when the app asks for the matching record.	Retrieval, question handling, provenance, contradiction handling, knowledge-base growth, causal analysis.
Challenge evidence	04_challenge_evidence	Introduce only after a related branch exists.	Revision control, source skepticism, hearsay resistance, and contradiction handling.

Default library contents

- Partner-provided Safety Handbook and relevant safety standards are copied unchanged into the default folder.
- R3_Area_Orientation.pdf supplies conceptual location vocabulary.
- R3_Roll_Balance_System_Primer.pdf supplies bounded component and energy context.
- R3_Outage_Roles_and_Records_Guide.pdf maps likely sources without answering the incident.

Recommended starter upload

- Preliminary_Incident_Notification_16515.pdf
- Initial_Scene_Sketch_and_Timeline.pdf
- Initial_Evidence_Register.pdf

Requested-evidence catalog

File	Expected request trigger
01_Mechanical_Assembly_and_Retention_Record.pdf	Design, retention, stopper, keeper, yoke, or load-path question.
02_Energy_Control_Plan.pdf	Required isolation boundary, gravity control, or verification question.
03_Lockout_Verification_Record.pdf	What was actually isolated, verified, signed, or transferred.
04_Shift_Turnover_Log.pdf	Previous-shift sequence, open conditions, or handoff.
05_Outage_Work_Scope_and_Sequence.pdf	Planned task, sequence, hold point, or change control.
06_JJHAC_JSHA_Record.pdf	Hazard recognition, controls, briefing, PPE, or task planning.
07_Witness_Statement_Packet.pdf	Observed motion, personnel activity, sound, or visibility.
08_Crane_Activity_Log.pdf	Crane lift, rigging, or equipment interaction.

File	Expected request trigger
09_Hydraulic_Status_and_Bleed_Verification.pdf	Pressure state, bleed, decay, or hydraulic support.
10_Scene_Photo_Index_and_Measurement_Log.pdf	As-found position, imagery, dimensions, or physical marks.
11_Post_Event_Mechanical_Inspection.pdf	Damage, wear, seating, fracture, or failure mode.
12_Similar_Stand_Inspection.pdf	Comparison, common mode, or abnormal configuration.
13_Scaffold_and_Pit_Occupancy_Record.pdf	Exposure window, scaffold condition, access, or potential injury.
14_Contractor_Crew_Qualifications.pdf	Who was involved, role, authorization, or competence.
15_Video_Review_Log.pdf	Exact timing, visible interaction, or motion sequence.
16_OEM_Engineering_Information_Request.pdf	Authoritative design requirement not established elsewhere.

Ground-truth discipline

- Every incident-specific record is synthetic and labeled on every page.
- Historical-source facts are explicitly distinguished from added synthetic scenario facts.
- Open and pending fields must remain unresolved until evidence is supplied.
- The package provides evidence, not an answer key or a required root cause.
