

80HSM Outage Roles and Records Guide

Default context for deciding who may know a fact and which record should be requested. Role names are generic for this synthetic test case.

Document ID	Incident	Record type	Status
R3-DEF-003	R3 carrier beam - 10/14/2024	Application test evidence	Synthetic / controlled

Role-to-evidence map

Role	Likely first-hand knowledge	Records to request
Area / shift manager	Work status, stop-work actions, turnover expectations, area control.	Shift log, turnover notes, incident notification, stand-down record.
Maintenance planner / supervisor	Approved work scope, sequence, equipment configuration, deviations.	Work order, maintenance practice, change authorization, completion log.
Energy-isolation lead	Isolation boundary, locks, verification method, shift transfer.	ECP/LOTO, group box sheet, zero-energy verification, lock audit.
Mechanical technician	Removal sequence, observed component position, temporary supports.	Task steps, field notes, measurements, inspection record.
Contractor supervisor	Crew assignments, access times, pre-job brief, qualifications.	Crew roster, JJHAC/JSHA, training cards, sign-in/out record.
Crane operator / lift coordinator	Crane movement and lifts near R3.	Crane activity log, radio log, lift plan, camera review.
Scaffold competent person	Platform status, inspection time, occupancy restrictions.	Scaffold tag, inspection sheet, access log, damage assessment.

Preservation principle

Default documents remain shared reference material. Starter documents belong to this incident/model run at submission. Requested evidence is added later with its own provenance, version, and source. No record should silently replace an earlier version.
